Subject: M6H1 – Harvey Response: Partial DEMOB Request Revision
Date: Tuesday, September 12, 2017 2:20:24 PM

We submitted this original request yesterday (Monday Sep 11). Here is our revision for consideration:

Our average workload starting tomorrow is 40 public water systems and dwindling. Our workload today was 88 PWS of which 66 had no previous assessment (all Non-Transient Non-Community systems)

Our process at this point is to revisit all systems that are NOT a status of "SITE" every 2 to 3 days. Those with a "SITE" status are scheduled for a site visit each day until one is conducted. Once an Op Status goes to "RESULTS", TCEQ is assuming the responsibility of determining if the BacT results are satisfactory according to their requirements in order to CLEAR (rescind) a boil water notice. i.e., our workload will not include systems with a status of "RESULTS"

All of our numbers of completed, remaining etc., are found in the 214B submitted on the evening of Sept 11.

Our revised request for contraction is as follows:

1. Demob all EPA Region 7 as soon as possible
2. Contract our Division to 2 Groups with Meaghan Bresnahan (EPA R6) and Westin Massey (TCEQ) as DW and WW Group Supervisors respectively
3. Move Robert Houston back to a field site assessment team
4. This gives us 3 EPA R6 staff to pair with TCEQ staff to finish conducting follow-up assessments at PWS
5. Reassign Texas State Guard as needed and possible retain two of them to cover unexpected events for DW teams
6. Westin Massey needs NO additional resources for the WW assessments

At this point, almost all of our workload consists of follow-up assessments at PWS that are still "yellow".

Our current field staffing levels include:

TCEQ Field Staff: 1 (more are available if needed)

Texas State Guard Field Staff: 8

EPA R7**Field staff: 7**

Brandon Boatman
Krystal Stotts
Candace Bednar
Neftali Hernandez-Santiago
Kim Willis-Burr
Laura Webb
Mike Martin

EPA R6**Field Staff: 2**

Miguel Moreno
José Rodriguez

Thanks,

Mark McCasland
